MEMORANDUM

Subject: Data Validation Report for the Volatile Organic Analysis (VOAs) of Samples from Duwamish River Expanded Site Investigation - Week 38 Sampling

From: *[Handwritten signature]*
Ginna Grepo-Grove, Chemist
Quality Assurance & Data Unit, OEA

To: Dave Bennett, Site Manager
Office of Environmental Cleanup

CC: Dana Hughes, Roy F. Weston, Inc.

The quality assurance (QA) review of nine sediment/soil samples collected from the above referenced site has been completed. These sample were analyzed for volatile organics (VOAs) in accordance with the USEPA Contract Laboratory Program (CLP) Statement of Work (SOW) for Organic Analyses (OLM03.2) and USEPA SW-846 Method 8260A by the US Environmental protection Agency's Manchester Environmental Laboratory located at Port Orchard, WA. The following samples were evaluated in this validation report:

98384002	98384004	98384008
98384016	98384021	98384022
98384023	98384024	98384025

DATA QUALIFICATIONS

The following comments refer to the laboratory performance in meeting the Quality Control Specifications outlined in the USEPA CLP SOW for Organic Analysis (OLM03.2), SW846 Method 8260A, the site's Sampling and Quality Assurance Plan (SQAP) and the USEPA CLP National Functional Guidelines for Organic Data Review (2/94).

The conclusions presented herein are based on the information provided for the review.

Holding Time - Acceptable

All of the samples met the technical (40 CFR 136) required holding times. The samples were analyzed within 7 days of sample collection date. None of the data were qualified on this basis. The Holding Times Summary listing the pertinent sample collection, receipt and analysis dates is attached at the end of this validation report.

Instrument Performance - Acceptable

One GC/MS system (Kirk) was used for the analyses. The system met the SOW specified technical acceptance criteria prior to sample analyses i.e., tuning and GC/MS performance checks, resolution, response factors and calibrations. The system remained stable throughout the course of analyses. Instrument blanks were all clean and there were no indications of carry-over.

Initial Calibration

An initial calibration was performed on 09/01/98. The frequency of analysis, the percent relative standard deviations (%RSDs) and correlation coefficients (*r*) met the required criteria with the following exceptions:

- the correlation coefficients (*r*) for acetone was less than 0.995 Due to possible bias, the reported results for acetone were qualified as estimated, "J/UJ".
- the mean response factors for acrylonitrile, tetrahydrofuran and chloroacetonitrile were <0.05 for both initial calibration curves. Due to possible bias, the non-detected acrylonitrile, tetrahydrofuran and chloroacetonitrile in the associated samples were qualified as unusable, "R".

Continuing Calibrations - Acceptable

The continuing calibration verification standards (CCVs) met the criteria for frequency of analysis, the minimum response factor, the retention times and the percent differences (%Ds) criteria. None of the data were qualified on this basis.

Compound Quantitation Limits

All of the samples were analyzed at the method required quantitation limits (QLs). All of the reported results were adjusted for sample amount analyzed, percent solids and dilution factors. The concentration of acetone detected in sample 98384008 was over the calibration linear range. This compound was qualified as estimated, "J". Data users should consider this value as the minimum amount present in the sample. Target compounds that were detected at concentrations less than the quantitation limits were qualified as estimated, "J".

Blanks

The frequency of analysis of laboratory blanks was met. Background levels for all target compounds in the method blanks were below the CRQLs. Traces of methylene chloride, acetone, toluene, hexachlorobutadiene, naphthalene, 1,2,4- and 1,2,3-trichlorobenzene were detected in the method blanks. The acetone, and methylene chloride detected in the samples at concentrations that were less than ten times the concentrations in their associated blanks were qualified as non-detects, "U". The rest of the compounds listed were flagged as non-detects, "U", when the compounds' concentrations were less than five times the value in their associated blanks.

Analytical Sequence - Acceptable

All of the standards, blanks, samples and QC samples were analyzed in accordance with the SOW-specified analytical sequence and within the acceptable 12-hour QC period. None of the data were qualified on this basis.

Surrogate Recoveries - Acceptable

The surrogate recoveries met the applicable QC criteria for all of the analyses performed. The recoveries ranged from 85 - 111%. None of the data were qualified on this basis.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Sample 98384004 was analyzed for MS/MSD. The frequency of analysis, the recoveries and relative percent differences (RPD) criteria were met the following exceptions:

- There were no recoveries for chloroacetonitrile, 1,1-dichloropropanone, and trans-1,4-dichloro-2-butene. Associated results were qualified as unusable, "R".
- The recoveries for the following compounds were less than the specified control limits, indicating low bias and were qualified as estimated, "UJ": methyl iodide, carbon tetrachloride, bromodichloromethane, bromoform, ethylmethacrylate, trans-1,3-dichloropropene, 1,1,1,2-tetrachloroethane, dibromochloromethane, 1,2,3- and 1,2,4-trichlorobenzene, pentachloroethane, hexachloroethane and hexachlorobutadiene.

Internal Standards - Acceptable

The acceptance criteria for internal standards (IS) are ± 0.5 minutes for retention time shifts and -50% to +100% of the IS area as compared to the IS retention time and area of the continuing calibration standard.

All of the GC/MS analyses met the IS area and retention time shift criteria. None of the data were qualified on this basis.

Compound Identification - Acceptable

All of the compounds detected were within the retention time windows, met the USEPA spectral matching criteria and were judged to be acceptable. None of the data were qualified on this basis.

Tentatively Identified Compounds

Peaks that were detected in the samples with areas >10% of the internal standards and were not part of the target compound lists were identified as tentatively identified compounds (TICs). All of the TICs reported were qualified as tentatively identified at estimated concentration, "JN".

Laboratory Contact

The laboratory was not contacted for this review.

Overall Assessment

All of the samples were analyzed in accordance with the method and SQAP specifications. Data results, as qualified, are acceptable and can be used for all purposes.

DATA QUALIFIERS

- U** - The analyte was not detected at or above the reported result.
- J** - The analyte was positively identified. The associated numerical result is an estimate.
- R** - The data are unusable for all purposes.
- N** - There is evidence the analyte is present in this sample.
- JN** - There is evidence that the analyte is present. The associated numerical result is an estimate.
- UJ** - The analyte was not detected at or above the reported estimated result. The associated numerical value is an estimate of the quantitation limit of the analyte in this sample
- L** - Low bias.
- H** - High bias.
- Q** - The result is estimated because the concentration is below the Contract Required Quantitation Limits (CRQLs).
- K** - Unknown Bias.
